

What is a LuxTrust Scan and how does it work?

The LuxTrust Scan is an electronic device with a LCD display and an integrated camera. The camera function allows the scanning of a dynamically generated "mosaic" that contains the data required for the generation of a One-Time Password (OTP). This device decodes the data of the operation and displays it for final validation (« What You See is What You Sign » (WYSIWYS)).

To connect yourself to an application, please enter your LuxTrust User ID, your LuxTrust Password and then scan the "mosaic" displayed in the application. The device then generates the OTP which has to be entered online for final validation of the operation in the OTP window reserved to this action (e.g. your e-Banking). LuxTrust only authorises the connexion if this three information are correct.

More information:

- ? The LuxTrust Scan device is part of the service contract between the User and LuxTrust.
- ? The services offered include the creation and management of an electronic certificate which protects the electronic identity of the user on the internet.
- ? The contract is in the form of a subscription with regular updates renewals.
- ? The electronic certificate is stored on a central server which is secured and protected by LuxTrust.
