

Sometimes the LuxTrust Middleware doesn't work. Is it because of the usage of a proxy?

When using a proxy the LuxTrust Middleware sometimes does not work.

Prerequisites:

The LuxTrust Middleware needs access to LuxTrust/Entrust OCSP, CRL and to Orelly.

What to do?

You have to give access to OCSP, CRL and Orelly by whitelisting the following URLs to enable OCSP check, CRL check and to get access to Orelly:

- ocsf.entrust.net
- ca.luxtrust.lu
- ltgroot.ocsf.luxtrust.lu
- crl.luxtrust.lu
- ssl.ocsf.luxtrust.lu
- orelly.luxtrust.com
